

PROFESSIONAL SUMMARY

Senior Frontend Engineer with 6+ years of experience building scalable enterprise applications using React, Angular, TypeScript, and JavaScript. Expertise in component-driven architecture, state management, micro frontend architecture, SPA development, performance optimization, PWA, accessibility standards, secure JWT-based authentication, and Agile product delivery for multi-tenant and microservice-based platforms. Proven track record of delivering healthcare, CRM, and e-commerce applications, including public-facing enrollment systems with secure user flows.

CORE TECHNICAL SKILLS

Frontend: React 18, Angular, Redux Toolkit, RxJS, Context API, PrimeReact, PrimeNG

Languages & Styling: TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS, Tailwind CSS, Bootstrap

Architecture & Build: Component-driven architecture, Micro Frontend architecture, Vite, modular UI design, performance optimization (lazy loading, code splitting)

Backend Integration: REST APIs, PHP, MySQL

Security & Tools: RBAC, token-based authentication (JWT), access & refresh tokens, MSAL, CIAM, Jest, Git, Bitbucket, Jira, Azure

PROFESSIONAL EXPERIENCE

Qualibar Pvt Ltd

Senior Software Engineer

May 2024 - Present

Healthcare Management Platform (Multi-Tenant Enterprise Application)

Tech Stack: React 18, Angular, TypeScript, Redux Toolkit, PrimeReact, Tailwind CSS, Microservices

Enterprise-scale healthcare platform supporting 50+ modules, 6+ user roles, and multiple client tenants, including admin-driven organizational management, secure public enrollment workflows, PWA support, and TDD-based frontend development practices.

Key Contributions:

- Led frontend development for a multi-tenant React application using React Hooks, Redux Toolkit, reusable component architecture, and modern state management patterns.
- Built reusable UI component libraries using PrimeReact and Tailwind CSS, improving UI consistency and reducing development time.
- Contributed to a scalable multi-repository React architecture across 3+ frontend applications, enabling independent development and efficient deployments.
- Developed a public-facing enrollment portal supporting multiple onboarding models with admin-controlled management of Groups, Agencies and Agents/Marketers.
- Enabled group/agent code enrollment via the public site, supporting the G2C(Group to Consumer), A2C(Agent to Consumer) and D2C(Direct to Consumer).
- Implemented token-based authentication using JWT, including access and refresh token handling.
- Enforced secure role-based access control (RBAC) across admin, agency, agent, and consumer roles.
- Supported development of a reusable React shell/enrollment flow package integrated across multiple applications, ensuring centralized updates, consistency, and reduced duplicate code.

- Implemented PWA support for the existing web application, delivering a mobile-friendly, app-like user experience with offline functionality and improved accessibility.
- Added notification services based on user-defined schedules, enabling both web and app users to receive timely reminders and updates.

VUI Component Library (Enterprise UI Design System)

Tech Stack: React, TypeScript, Vite, PrimeReact, Tailwind CSS

Key Contributions:

- Designed and developed a reusable enterprise UI component library using React and TypeScript.
- Built standardized components, including forms, tables, modals, dashboards, and layout systems.
- Created a standalone UI application for component development and validation.
- Enabled component reuse across multiple applications via dependency linking.
- Ensured standardized accessible UI patterns aligned with HIPAA and PCI compliance requirements, improving consistency and long-term maintainability across applications.

VEnrollment Library (Micro Frontend)

Tech Stack: React, TypeScript, Vite, PrimeReact, Tailwind CSS

Key Contributions:

- Developed a reusable micro frontend enrollment library using React and TypeScript for integration across multiple applications.
- Built highly customizable enrollment workflows with client-specific form configurations and dynamic page rendering capabilities.
- Integrated shared UI components from the VUI design system to maintain consistent styling and user experience across applications.
- Designed the library to consume APIs from parent applications, enabling flexible data handling and seamless host application integration.
- Supported multi-repository integration through package linking and modular architecture for enterprise-wide reuse.

Stic Soft E-Solutions Pvt Ltd

Software Engineer

Sept 2020 - Apr 2024

PizzaHut (E-commerce Platform)

Tech Stack: Angular, TypeScript, Bootstrap, PrimeNG, RxJS, REST APIs

Large-scale customer-facing e-commerce platform supporting online ordering workflows across 10+ international regions, including Middle Eastern markets with RTL (Right-to-Left) layout support.

Key Contributions:

- Contributed to the development and maintenance of the Pizza Hut web application for Yum! Brands, supporting large-scale customer-facing e-commerce workflows.
- Developed responsive and dynamic frontend modules using Angular and TypeScript to improve usability and customer experience across web platforms.
- Supported region-specific UI adaptations and RTL layout implementations for Middle Eastern markets to ensure consistent multilingual user experiences.

- Built reusable Angular components, shared services, and reactive programming patterns using RxJS to improve maintainability and reduce duplicated development effort.
- Integrated REST APIs and backend services for seamless frontend API integration, order management, customer interactions, and real-time data rendering.
- Supported deployment activities across Dev, QA, UAT, and Production environments while assisting with Angular version upgrades and release stability.
- Participated in debugging, testing, code reviews, and production issue resolution to ensure reliable application performance and high-quality releases.
- Improved frontend performance through bundle optimization, lazy loading, and render efficiency enhancements, reducing initial load time and improving Lighthouse performance metrics.
- Collaborated within a cross-functional Agile team to deliver new features, production fixes, and continuous application improvements.

LetsGettin Private Limited

Associate Software Engineer

Sept 2019 - Sept 2020

Internal Web Applications & Learning Projects

Tech Stack: HTML5, CSS3, Bootstrap, JavaScript, Angular

Worked on frontend application development while building foundational expertise in modern web technologies and Angular-based application development.

Key Contributions:

- Started frontend development with HTML, CSS, Bootstrap, and JavaScript, building responsive and user-friendly web pages.
- Gained hands-on experience with Angular fundamentals, including components, services, directives, routing, and form handling.
- Worked on responsive layouts, UI enhancements, debugging, and basic feature implementations under senior developer guidance.

AWARDS & RECOGNITION

- Awarded “Star of the Quarter” in 2022 by Stic Soft for outstanding performance and significant contributions to project delivery and team impact.
- Successfully executed Angular version upgrades from v4 to v13 across multiple projects, demonstrating strong expertise in framework migration and application modernization.
- Gained enterprise-level experience working on global e-commerce platforms for Yum! Brands, a Fortune 500 company, supporting multi-region business workflows and large-scale production applications.
- Recognized as a “Quick Learner” at LetsGettin for rapidly adapting to new technologies, frontend frameworks, and development practices.

EDUCATION

Bachelor of Technology [ECE Hons.]

Lovely Professional University - 2018
